# Lesson 4

Other Arithmetic operators:

**Exponentiation**(**): to the power of

**Floor division:** (//): standard division but drops decimal

**Modulus:**(%):returns remainder

these can only be used on ints and floats

Type function:
returns data type of a value
type()

# Printing a sentence using variables

**1) f string-**
**print(f"Hello {name}, you are {age} years old.")**

**2) commas-**
**print("Hello", name, "you are", age, "years old.")**

**3) Concatenation (+)**
**print("Hello " + name + "!")**
-cannot comcatenate ints with string

# Write a program

Asks user for their name, age, school; store them in variables

prints a statement using those variables

use input function

# Comparison Operators

**What they do:** Compare two values and return **True or False**

**Think of it like:** Python is answering a yes or no question

| Operator | Meaning | Example | Result |
|---|---|---|---|
| `==` | equal to | `5 == 5` | True |
| `!=` | not equal to | `5 != 3` | True |
| `>` | greater than | `10 > 3` | True |
| `<` | less than | `2 < 1` | False |
| `>=` | greater or equal | `5 >= 5` | True |
| `<=` | less or equal | `3 <= 2` | False |

# Write a program

Asks 2 users for their age

print if the users' ages are the same;
use comparison operators.

use input function

# Logical Operators

AND, OR, NOT

-you have 2 different conditions

**-the And operator will say True if both of them are true**

**-the Or operator will say True even if only 1 of them are true**

To go on a school trip you need to have your permission slip AND have paid the fee. If you only have one, can you go?

You get extra credit if you submit early OR if you fix your mistakes and resubmit. Do you need both?

| | `and` | `or` |
|---|---|---|
| True, True | ✅ True | ✅ True |
| True, False | ❌ False | ✅ True |
| False, False | ❌ False | ❌ False |

**Not**

Just flip it

True becomes False
and False becomes
True

Arithmetic: compute mathematical calculations
Comparison: compares 2 values
Logicals: combines multiple conditions to return boolean values

# Thank You!

Any Questions?
